## FRONT END DEVELOPER

## WORK EXPERIENCE

### Digikull Institute (Training)

#### Task/Assignment

- **React Redux**: In this application, How to add items in the card in a shopping application by using Redux. Link
- **Tip Calculator Javascript**
- **Dating Application**: Form of dating application design in HTML using attributes.
- **To Do List mini-project**: - In this to-do list app with react and redux. Users can add new todos, mark as completed, remove a todo, and filter todos.
- **Routing** - In this project, I create a page to show the component lifecycle. Each phase should be a separate tab, clicking on each tab it showing the description and content of that specific phase along with the URL.
- **Tip Calculator** - In this app it calculates the total tip offered by the various customer according to their experience. For example, if the experience is excellent and the total bill of the customer is 2000 the total tip would be 20% off 2000 i.e 400. In this app, I show the customer name and the tip amount 400 as an output for each customer.
- **React Axios**- React application that fetch the customer data from api and display the data in this app. In this project, I provide an option to add customer by entering the name of the customer in input area. POST request for Add name GET request for fetch name I use axios and JSON placeholder.
- **Form Validation**- Create a single page to display a product of your choice along with an option to submit a feedback comment. Upon clicking the comment button. Validation: If you try to submit the form with less than 2 char or more than 15 char in Your name.
- **YouTube Clone Project**
